

De: Esteban Hernández, 2008. "Social + Semantic Differentiation in Casual Form of Address Variation." Bulletin of Hispanic Studies 84, 703-724.

Table 3. Results of the Variable Rule Analysis of the contribution of factors selected as significant to the choice of *tuteo* over *voseo*

	Prob	%	N
SOCIAL FACTORS			
TYPE OF INTERACTION			
individual	.72	29	18
Group	.46	22	83
		Range 26	
TYPE OF ADDRESS			
Formal	.61	27	69
Casual	.36	17	32
		Range 25	
EDUCATION			
university	.57	25	94
no university	.19	10	7
		Range 38	
LINGUISTIC FACTORS			
PRONOUN			
Tú	.89	75	3
Ø	.70	29	97
Vos	.05	1	1
		Range 88	
VERB FORM			
Imperative – negative	.82	69	16
Subjunctive	.80	44	4
Present – affirmative	.50	23	51
Present – negative	.49	23	6
Imperative – affirmative	.30	15	24
		Range 79	

$p < .01$; Log likelihood = -181.311; Chi-square/cell = 0.9083

* Factor not selected as significant: sex of the speaker.
